

BIOCHEK® LOTION

Surgical Hand Scrub & Healthcare Personnel Handwash

Your healing hands deserve the **BIOCHEK LOTION** triple advantage!

1 Ethanol & Chlorhexidine for Long-Lasting Protection

- Both CDC and WHO guidelines for hand hygiene recommend the use of formulations containing Chlorhexidine and alcohol for optimum hand hygiene
- Alcohol gives immediate microbicidal impact, while Chlorhexidine gluconate gives persistent antimicrobial action
- 99.99% of germs eliminated in 15 seconds (tested as per EN 1040:2005 against *S. Aureus* and *P. Aeruginosa*)
- Biochek Lotion** is ideal for use as a **waterless hand scrub** in place of pre-surgical hand scrubbing with water

ISO 13485 Medical Devices Certified QMS

2 Premium Moisturizers & Emollients for Maximum Skin Protection

- Frequent scrubbing with water & repeatedly using alcoholic hand sanitizers is effective, but bad for your skin; it can lead to increased colonization and shedding of infectious germs! Skin needs to be soft & moisturized to be healthy and maintain its natural barrier integrity
- Biochek Lotion** is specially formulated to protect your skin; the advanced new emollient-packed lotion formulation helps prevent dry, cracked hands, while preserving skin barrier integrity
- According to the CDC, irritation & dryness are the leading cause of poor adherence to hand-hygiene practices in hospitals; **Biochek Lotion** can help improve hand-hygiene compliance by leaving hands moisturized and users happy!
- Skin sensitivity testing performed using **Biochek Lotion** as per ISO 10993-10:2010(E) guidelines proved its exceptional skin friendliness; on a Skin Irritation Index Scale of 0.0 (Completely Non-Irritant) to 8.0 (Severely Irritant), the Skin Irritation Index of **Biochek Lotion** was found to be 0.0

3 High Viscosity Formulation for Spill-free Usage

- Free-flowing liquid formulations often lead to problems such as spillage, spurling & splashing onto aprons leading to staining, wastage and other inconveniences
- Biochek Lotion** is formulated as a high-viscosity lotion, which is easy to dispense and hold in your hands; it will not splash or spill, and is easy and pleasant to use!

Composition:

Chlorhexidine Gluconate Solution IP.....5% v/v
(eq. to Chlorhexidine Gluconate1% w/v)
Ethyl Alcohol IP.....61% w/v
Purified Water IP.....qs
Moisturizers & Emollients
Color: Carmoisine

DIRECTIONS FOR USE:

Surgical Hand Antiseptic:

- Apply to clean, dry hands and nails. For the first use of the day, clean under nails with a nail cleaner.
- Take about 2 ml of liquid into the palm of one hand and dip the fingertips of the other hand and ensure that it reaches under the fingernails
- Spread the liquid over the hand and up to just above the elbow
- Repeat with the other hand, taking 2 ml more liquid
- Take 2 ml more into either hand and reapply thoroughly on both hands, up to the wrists
- Allow the liquid to dry from hands completely, before wearing gloves

Healthcare Personnel Hand Antiseptic:

- Apply to clean, dry hands and nails. For the first use of the day, clean under nails with a nail cleaner.
- Take about 2 ml of liquid into the palm of one hand
- Apply the liquid thoroughly to both hands up to the wrists, taking care to cover the areas between fingers and under the fingernails
- Allow the liquid to dry from hands completely, without wiping them
